

Title	Financial Analytics System for a Credit Cooperative
Author/s	Winston G. Domingo, Dr. Gigid T. Battung
ABSTRACT	
<p>Though they may be fast-growing in terms of profitability, cooperatives are more financially vulnerable and risky because of their nature as an organization. The financial analytics system developed in this paper aids the cooperative management in this study with the analysis of information helpful in making economic decisions. The system provided sufficient support to the cooperative executives so they can be efficient and guided with what are alternatives and their potential consequences in financially managing their economic resources. The developed system was assessed to have high compliance with ISO 25010 quality standards.</p>
